Lab 2: User Stories Report

Developer User Stories

1. View Assigned Issues

- As a developer, I want to see a list of issues assigned to me, so that I can easily track the tasks I need to work on.
- As a developer, I want to open an issue to view its full details, so that I understand the task requirements before starting work.

2. Update Issue Status

- As a developer, I want to update the status of an issue, so that the team can track the progress of my work.
- As a developer, I want to see the history of status changes for an issue, so that I can understand how the task has progressed over time.

3. Add Comments

- As a developer, I want to add comments to an issue, so that I can share updates or ask questions related to the task.
- As a developer, I want to edit or delete my comments, so that I can correct or update the information I posted.

4. Add Attachments

- As a developer, I want to upload files to an issue, so that I can provide supporting materials such as screenshots or documents.
- As a developer, I want to view attachments on an issue, so that I can access the files related to the task.

5. Track Personal Tasks

- As a developer, I want to see my tasks organized by deadline or priority, so that I can plan my work efficiently.
- As a developer, I want to see which tasks are overdue or completed, so that I can track my progress and meet deadlines.

DESCRIPTION
Users are experiencing issues logging in on Safari browsers. The session token is not being stored correctly in Safari's cookie storage. This appears to be related to Safari's third-party cookie blocking policy. We need to investigate alternative storage methods or adjust our cookie settings.

I've reproduced this on Safari 17. Looking into the cookie settings now.
Sarah Chen 2026-03-08 09:15
Found the issue - we need to set SameSite=None and Secure flags. Working on a fix.

System Administrator User Stories

1. User and Role Management

- As a System Administrator, I want to create, update, and manage users and their roles, so that I can control access and permissions across the system.

2. Project Overlooker

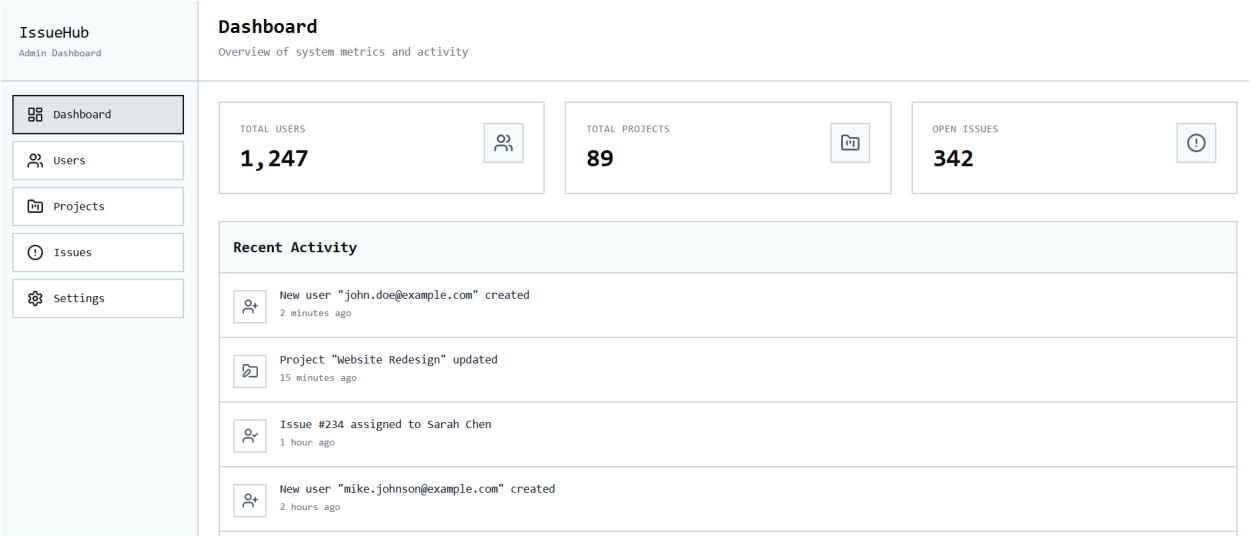
- As a System Administrator, I want to keep tabs on active and inactive projects depending on granted permissions from Project Managers, so that I can intervene to solve any bug-related issues.

3. System Configuration

- As a System Administrator, I want to configure system-level settings, so that the platform operates according to organisational policies and requirements.

4. System Monitoring

- As a System Administrator, I want to view all issues across all projects, so that I can monitor activity and ensure proper system usage.



Project Manager User Stories

1. Create Project

As a Project Manager,
I want to create a new project,
So that I can organize tasks for my team.

2. Add Team Members

As a Project Manager,
I want to add team members to a project,
So that they can collaborate and work on tasks.

3. Create Tasks

As a Project Manager,
I want to create tasks or issues,
So that project work can be tracked.

4. Assign Task

As a Project Manager,
I want to assign tasks to specific team members,
So that responsibilities are clearly defined.

5. Set Priority

As a Project Manager,
I want to set priority levels for tasks,
So that the team focuses on the most important work first.

6. Set Deadlines

As a Project Manager,
I want to define deadlines for tasks,
So that work is completed on time.

7. Track Progress

As a Project Manager,

I want to see the progress of tasks on a Kanban board,
So that I can easily monitor project status.

8. Identify Delayed Tasks

As a Project Manager,
I want to see which tasks are overdue,
So that I can quickly take corrective action.

9. Communicate with the Team

As a Project Manager,
I want to comment on tasks,
So that I can communicate updates and instructions to the team.

10.Billable hours and project advancement (Dashboard)

As a Project Manager,
I want to see the available work capacity of team members,
So that I can assign tasks without exceeding project or developer time limits.

As a Project Manager,
I want the system to warn me when assigned tasks exceed the planned project hours,
So that the project stays within its time budget.
